THE P R E F A C E.

THE established Credit which those Tables have, which usually go under the Name of Sir Isaac Newton, was Reason sufficient for me to proceed in the same general Method of Valuation, in composing the following Tables for renewing of Leases. But when as the Rate of Interest alters, Fines constantly in like manner altering, it was absolutely necessary that other Tables should be constructed, which might be of present Use. In those there was a Computation exact enough for the Purchasing of Leases, or for the Renewal of them at 5, 6, 8, 10 and 12 per Cent. But since that time the Rate of Interest being sunk to 3 and 4 per Cent. it was become necessary to compute Tables for these Rates of Interest.

And because I would make this Treatise as compleat as I could in so short a Compass, I have considered the Case of

purchasing Annuities upon one, two, and three Lives, and have shewn how you are to find the Value of Lives in any usual Combination of them.

Another thing which I had in View was, that as, generally, Tables of Compound Interest are constructed upon a Supposition that Interest is paid only yearly, yet since the Dividends upon the Funds are paid half yearly, and the Difference between these two ways of computing is so considerable as to make a Difference of above 800 l. in the amount of 100 l. at the Rate of 5 l. per Cent. in 100 Years, I thought it was necessary to have some Tables constructed upon this Foundation.

The Tables of Simple Interest, I am of Opinion, will be found to be more exact than any hitherto published; but should they be yet imperfect (which I think they are not) I will return the Money to any Person that shall shew me an Error of a Penny in any Book attested to be examined by me. And though I have computed the Interest only for the Rates of 3, $3\frac{1}{2}$, 4, and 5 per Cent. yet the Interest may be exactly found at the Rates of 6, 7, 8, and 10 per Cent. by doubling either the Sum or the Time.

Of the Construction and Use of the foregoing Tables.

CHAPTER I. TABLE I.

THE Table of Reversions sheweth the decrease of One Pound Yearly, according to those several Rates of Interest; or what One Pound due at the End of any Number of Years to come, not exceeding 50, is worth in ready Money, at 3, 4, 5, 6, 7, 8, 9 and 10 *per Cent. per Ann.*

EXAMPLE.

What is One Pound, due a Year hence, worth in ready Money allowing 5 *per Cent.* Interest?

For Answer, Let 100 *l.* with the Interest for a Year added thereunto, be the first Term in the Rule of Three; 100 *l.* the second, and 1 *l.* the third, then

As is to so is to *s. d. q.*

105, 100 :: 1 ,95238 or 19. 0. 2

And by dividing the Quotient ,95238 by 1,05, the next Quotient will be ,907, &c. or 18 *s. 1 d. 2 q.* for the present Worth of One Pound due at the End of two Years; and so by a continual Geometrical Proportion decreasing, it comes to pass that 20 *s.* to be paid 21 Years hence, is worth but 7 *s. 2 d.* ready Money, that is, 7 *s. 2 d.* paid now, will, in 21 Years, at 5 *per Cent. per Ann.* Compound Interest, increase

crease to 20 *s.* Now to renew a Lease of 21 Years that hath but 1 Year lapsed, according to the Rate of 5 *per Cent. per Ann.* I look in the Table of Reversions against 21, and under the Rate mention'd, I find in the common Angle of meeting, 7 *s.* 2 *d.* which is the Fine to be given to renew 1 Year lapsed in the said Lease, supposing the Rent to be One Pound *per Ann.*

Suppose again, that there be two Years lapsed in the same Lease, then by the Table of Reversions, I find that 20 *s.* to be paid 20 Years hence, is worth 7 *s.* 6 *d.* 1 *q.* ready Money, according to the aforesaid Rate of Interest; now the Sum of these two Reversions, *viz.* 7 *s.* 2 *d.* and 7 *s.* 6 *d.* 1 *q.* is the Fine to be paid to make up the Lease 21 Years again, supposing the Yearly Rent to be One Pound; for 14 *s.* 8 *d.* $\frac{1}{4}$ paid now, will countervalue the two Years Rent which the Landlord was to receive the two Years after 19, had not the Lease been made up; from which the Reason very plainly appears, why such a Fine should be given to renew such a Number of Years lapsed, according to such a Rate of Interest.

Now although the foregoing Tables for Renewing, are only for Leases of 21 and 40 Years; yet by this Table of Reversions may be made Tables for Renewing of Leases for any Number of Years under 50: as for Example, suppose in a Lease of 31 Years, I am to renew 7 Years lapsed, allowing 6 *per Cent.* Profit; to do this, I take the Sum of the Reversions for 7 Years from 31, counting that as one, 30 as two, &c. back to 25 Years, by which I find the Sum to be 1 *l.* 7 *s.* 6 *d.* 1 *q.* that is 1 Year, 1 Quarter, 1 Month,

1 Month, and 5 Decimal Parts Purchase, which is the Fine to be paid for renewing the 7 Yeats lapsed required; this being understood, it will not be difficult to do the like for any other Number of Years lapsed, either in this or any other Lease, and according to any other Rate of Interest.

The Table of Reversion is also useful for purchasing the Reversion of an Estate.

EXAMPLE.

Suppose an Estate whose Fee-Simple, or real Value is 100 *l.* and it be mortgaged or leased out for 20 Years; what is the Reversion thereof worth at 4 *per Cent.*?

For Answer, I find by the Table the present Worth of 1 *l.* to be paid 20 Years hence, is at 4 *l. per Cent.* 9 *s.* 1 *d.* 2 *q.* Then,

		<i>l.</i>	<i>s.</i>	<i>d.</i>
100 times 9 <i>s.</i> is	_____	45.	0.	0
100 times 1 <i>d.</i> is	_____		0.	8. 4
100 times 2 <i>q.</i> or 200 <i>q.</i> is	_____		0.	4. 2

The Sum 45. 12. 6

is very near the present Value of 100 *l.* to be paid 20 Years hence; which is the Answer to the Question.

Note, I say very near the present Value, because by Decimal Tables the Answer is more exactly found to be 45 *l.* 12 *s.* 9 *d.*

CHAP II. TABLE II.

THE Table for Purchasing, sheweth the Values in Years, Quarters, Months, and Decimal Parts of a Month, and is calculated for several Rates of Interest, for in Purchasing of Freehold Land 3, 4, or 5 *l. per Cent.* may be enough, but for Leases of Houses 6, 8, or 10 *l. per Cent.*

The Use of this Table is very plain and easy, as by Example will appear: *viz.* What is a Lease or Annuity of 20 *l. per Ann.* worth, for 21 Years at 5 *per Cent.*?

Against 21 Years, and under 5 *per Cent.* I find 12 Years, 3 Quarters, 0 Months, 8 Parts, then by the Table of Reduction I find,

	<i>l.</i>	<i>s.</i>	<i>d.</i>
3 Quarters at 20 <i>l. per Ann.</i> is	15.	0.	0
8 Decimal Parts is	—	1.	6. 8

16. 6. 8

The 12 Years Value (*i. e.* 12 x 20) add 240. 0. 0

Answer *l.* 256. 6. 8

To increase the Number of Years in a Lease, or, to buy a Lease which is not to begin until your old Lease is out, is thus: Suppose a Man's Lease is out within 4 Years, and he desires to have a new Lease of 21 Years, to begin when his 4 Years are out, what is that Lease worth in ready Money?

For

For Answer, I add 4 Years, which is the Time he hath in his old Lease, and 21 together, the Sum is 25; then I find the Worth of these 25 Years, and subtract from it the Value of the 4 Years, the Remainder is the Value of the said Lease.

E X A M P L E.

	<i>Tri.</i>	<i>Q.</i>	<i>M.</i>	<i>Pts.</i>
A Lease of 25 Years at 6 per Cent. is worth	}	12.	3.	0. 3
The 4 Years at the same Rate are worth		3.	1.	2. 6
Which Subtract,				
The Remainder is the Value of the Lease required	}	9.	1.	0. 7

And suppose this Lease to be 135 *l.* per Ann. then by the Table of Reduction I find

against 100 <i>l.</i> and	{	under 1 Quarter	25. 0. 0
		under 7 D. Parts	5. 16. 8
against 30 <i>l.</i> and	{	under 1 Quarter	7. 10. 0
		under 7 D. Parts	1. 15. 0
against 5 <i>l.</i> and	{	under 1 Quarter	1. 5. 0
		under 7 D. Parts	0. 5. 10
The 9 Years Value (<i>viz.</i> 135 x 9)	}		1215. 0. 0

The Sum is *l.* 1256. 12. 6

Which is the Fine reduced into Money.

CHAP. III. TABLES III. and IV.

THE first part of the Table for renewing of any Number of Years lapsed in a Lease of 21 Years, is calculated at 11 *l.* 11 *s.* 8 *d.* 1 *q.* $\frac{3}{10}$ *per Cent. per Ann.* Compound Interest; so that the Fine for renewing 7 Years lapsed, or the present Worth of 7 Years in Reversion, not to begin till 14 are expired, is exactly one Year's Value: The other Parts of this Table may be made from the Purchase Table, thus, *viz.* I find by that Table, that the total Value of a Lease for 21 Years, at 3 *per Cent. per Ann.* is 15 *ys.* 1 *q.* 1 *m.* 9 *pts.* Purchase, from which I subtract the Value of a Lease for 20 Years at the same Rate, which is 14 *ys.* 3 *q.* 1 *m.* 5 *pts.* and the Remainder 2 *q.* 0 *m.* 4 *pts.* is the Value of 1 Year lapsed in the said Lease of 21 Years: Again, from the Value of the whole Lease I subtract the Value of a Lease of 19 Years, *viz.* 14 *ys.* 1 *q.* 0 *m.* 9 *pts.* and there remains 1 *y.* 0 *q.* 1 *m.* 0 *pts.* for the Value of 2 Years lapsed in the said Lease; and by subtracting the Value of a Lease of 18 Years from that of 21 Years, there will remain the Value of 3 Years lapsed in the said Lease of 21 Years, &c. until the Table is completed.

By observing the foregoing Rule, it will be very easy for any Gentleman to compose a Table for the renewing of any Number of Years lapsed in any other Lease: as for Example, suppose I wanted a Table for the Renewing of some of the Years lapsed in a Lease of 10 Years, at the Rate of 5 *per Cent. per Ann.* I find by the Purchase Table, the whole Value of a Lease for

10 Years, at 5 per Cent. to be 7 *ys.* 2 *qs.* 2 *ms.* 6 *pts.* from which I subtract the Values of the Leases for 9, 8, and 7 Years, &c. and there do remain 2 *qs.* 1 *m.* 3 *pts.* 1 *y.* 1 *q.* 0 *m.* 1 *pt.*; and 1 *y.* 3 *qs.* 2 *ms.* 2 *pts.* for the Values of 1, 2, 3 Years, &c. lapsed in the said Lease of 10 Years.

The Years *in Esse* may be valued as a Lease of so many Years; as in the Lease for 40 Years, if 14 Years are run out, then there are 26 *in Esse*, whose Value are as a Lease of 26 Years, and may be found by the Table for Purchasing; or if you subtract the Value of the Years in Reversion from the Value of the whole Lease, the Remainder is the Value of the Years *in Esse*; and *vice versa*, if you subtract the Value of the Years in *Esse* from the Value of the whole Lease, there will remain the Value of the Years in Reversion.

To find the Value of some of the Years in Reversion; as suppose 7 Years are expired in a Lease of 21 Years, and I would add 3 Years to the 14 *in Esse*, I do thus; because 3 wants 4 of 7, I take the Value of 4 Years in Reversion, from the Value of 7 in Reversion, the Remainder is the Value of the 3 Years required.

EXAMPLE

The Value of 7 Years in Reversion at 10 per Cent. is } 1. 0. 0.

The Value of 4 Years in Reversion at the same Rate is } 0. 1. 2.

Which subtract, } 0. 2. 0.

Remains 0. 2. 0. Which Remainder being given for a Fine, will make up the Lease to 17 Years, that is 3 added to 14.

CHAP. I. Of Annuities upon Lives.

THE Learned Dr. HALLEY, in Number 196 of the Philosophical Transactions, published a Table of the Values of Annuities upon single Lives, computed for an Interest of 6*l.* per Cent. for Money; but as since that Time Interest is reduced to 4*l.* per Cent. in our Government Securities, I have computed the following Table for that Rate of Interest.

Age.	Purchase Yrs. Pts.	Age.	Purchase Yrs. Pts.	Age.	Purchase Yrs. Pts.
1	11,89	25	14,80	50	10,45
5	16,65	30	13,96	55	9,55
10	16,72	35	13,08	60	8,40
15	16,53	40	12,29	65	7,12
20	15,62	45	11,39	70	5,70

By this Table it appears, that an Annuity for the Life of a Person of 25 Years of Age, is estimated at $14\frac{8}{100}$ Years Purchase; *i. e.* One Pound *per Annum*, is reckoned worth 14*l.* 16*s.* Ten Pounds *per Ann.* is worth 148*l.* And 100*l.* *per Annum* is reckoned worth 1480*l.* &c.

But it ought to be observ'd, that according to our Weekly Bills, very near half the Persons that are born in *London* die under Five Years of Age: And the Hazards of Persons between 15 and 25 are so many, that an Annuity may in Fact be purchased cheaper upon a Life under 25, than upon the Life of a Person of 30 or 40 Years of Age: And therefore I reckon, 14 or

14 $\frac{2}{3}$ Years Purchase to be the full Market Price for the best Life.

For combining two or three Lives together, and for finding the Values of renewing in such Combinations, I will make use of the Rules laid down by Mr. *De Moivre*, in his Treatise of Annuities upon Lives.

P R O B L E M I. *

The Values of two single Lives being given, to find the Value of an Annuity granted for the Time of their joint Continuance.

S O L U T I O N.

1. Multiply together the Values of the Lives, and the Product again, by the Rate of Interest, and let the new Product be made the Numerator of a Fraction.

2. Add Unity to each of the single Values, and let these two Values thus increased by Unity be multiplied together, and from the Product subtracting the Numerator before found, let the Remainder be made the Denominator of the said Fraction.

3. Divide the Numerator by the Denominator, and the Quotient will be the Value of an Annuity to continue so long as both the Lives together are in Being.

Thus it will be found, that if two Lives singly taken, be respectively worth 8 and 10 Years Purchase, the Value of an Annuity upon

* Vide M. *De Moivre*'s IVth Problem, p. 32.
the

(29)

the two joint Lives, will be worth 5, 6 Years Purchase, allowing 5 per Cent. for Money, as will appear by the following Operation.

8 Value of the first Life.

10 Value of the second.

Product 80 Which multiplied by the

1,05 Rate of Interest

84 new Product, Numerator of the Fraction.

9 First Value increased by 1.

11 Second Value increased by 1.

Product 99

Subtract 84 Numerator first found.

Remaind. 15 Denominator of the Fraction.

Fraction $\frac{84}{15}$

15) 84 (5, 6 Values of the two joint Lives.

In the same Manner, it will be found that if the Values of the single Lives were respectively 9, and 9 Years Purchase, the Value of an Annuity upon the two joint Lives would be 5, 69.

PROBLEM II.

The Values of two single Lives being given, to find the Value of an Annuity upon the longest of them; that is, to continue so long as either of them is in Being.

SOLUTION.

From the Sum of the Values of the single Lives, subtract the Values of the two joint Lives

Lives found by the preceding Problem, the Remainder will be the Value of the Annuity required.

Thus if the two single Lives taken be respectively worth 8 and 10 Years Purchase, the two joint Lives by the preceding Problem will be worth 5; 6; therefore,

From the Sum of the Values of the } 18. 0
two single Lives, viz.

Subtract the Value of the two joint } 5. 6
Lives, viz.

The Remainder is ————— 12. 4

which is the Value of an Annuity upon the longest of them.

PROBLEM III.

The Values of three single Lives being given, to find the Value of an Annuity granted for the Time of their joint Continuance.

SOLUTION.

1. Multiply the Values of all the single Lives together, and the Product again by the Square of the Rate of Interest, and let the Product be made the Numerator of a Fraction.

2. Add Unity to each of the single Lives, and let all the Values thus increased by Unity be multiplied together; and from the Product subtracting the Numerator before found, let the Remainder

Remainder be made the Denominator of the same Fraction.

3. Divide the Numerator by the Denominator, and the Quotient will be the Value of an Annuity upon the three joint Lives.

Thus it will be found, that if three Lives singly taken, be respectively worth 8, 10 and 12 Years Purchase, the Value of an Annuity upon the three joint Lives, will be 4, 63, as will appear by the following Operation.

8 Value of the first Life.

10 Value of the second.

12 Value of the third.

960 Product of the 3 Values, which multiplied by 1,1025 Square of 105 the Rate of Interest.

New Prod. 1058, 4 Numerator of the Fraction.

9 Value of the 1st. Life increased by 1.

11 Value of the 2d. increased by 1.

13 Value of the 3d. increased by 1.

Product 1287 from which subtracting

1058, 4 Numerator before found,

Rems. 228, 6, Denominator.

Fraction $\frac{1058,4}{228,6}$

228, 6) 1058, 4 (4, 63 Value of the three joint Lives.

(32)

PROBLEM IV.

The Values of three single Lives being given to find the Value of an Annuity upon the longest of them.

SOLUTION.

From the Sum of the Values of the single Lives, subtract the Sum of the Values of all the joint Lives combined Two and Two; to the Remainder, add the Value of the three joint Lives, the Sum will be the Value of an Annuity upon the longest of them.

Thus, if the three single Lives taken be respectively worth 8, 10 and 12 Years Purchase, it will be found that the Value of an Annuity upon the longest of them will be worth 15, 4 Years Purchase, as will appear by the following Operation.

8	Value of the first Life.
10	Value of the second.
12	Value of the third.
30	Sum of all the single Lives.
5, 6	Value of the 1st and 2d taken jointly, as may be deduced from the first Problem.
6, 22	Value of the first and third.
7, 41	Value of the second and third.
19, 23	Sum of all the Values combined Two and Two; which being subtracted from 30, Sum of all the single Values,
Remains 10, 77,	to which adding
4, 63	Value of the three joint Lives.
Sum — 15, 40	Value of the Annuity upon the longest Life.

16.

In the same manner, it will be found that if three single Lives were respectively valued at 10 Years Purchase, the Value of an Annuity upon the longest of them would be 15, 14 Years Purchase.

Though the foregoing Problems will very easily be apprehended by every one that understands the common Rules of Decimal Arithmatick, yet, that I may facilitate the Operations as much as possible, I have computed the following Tables for Lives of equal Values.

TABLE I. Reckoning Money at 5 per Cent.

One Life.	2 Lives jointly.	3 Lives jointly.	The longest of 2 Lives.	The longest of 3 Lives.
Yrs. Pur.	Yrs. 100	Yrs. 100	Yrs. 100	Yrs. 100
5. —	2,69	1,76	7,31	8,69
6. —	3,37	2,27	8,63	10,15
7. —	4,10	2,82	9,90	11,52
8. —	4,87	3,43	11,13	12,82
9. —	5,69	4,09	12,31	14,03
10. —	6,56	4,82	13,44	15,14
11. —	7,50	5,63	14,50	16,14
12. —	8,49	6,53	15,51	17,04
13. —	9,57	7,53	16,43	17,83
14. —	10,72	8,65	17,28	18,50
15. —	11,96	9,92	18,04	19,04
16. —	13,31	11,37	18,69	19,45

TABLE II. Peckoning Money at 4 per Cent.

One Life.	2 Lives jointly.	3 Lives jointly.	The longest of 2 Lives.	The longest of 3 Lives.
Yrs. Pur.	Yrs. 100	Yrs. 100	Yrs. 100	Yrs. 100
5. —	2,60	1,67	7,40	8,87
6. —	3,24	2,14	8,76	10,42
7. —	3,91	2,63	10,09	11,91
8. —	4,61	3,16	11,39	13,33
9. —	5,35	3,73	12,65	14,69
10. —	6,12	4,34	13,88	15,99
11. —	6,93	4,99	15,07	17,20
12. —	7,78	5,70	16,22	18,35
13. —	8,68	6,46	17,32	19,41
14. —	9,63	7,29	18,37	20,39
15. —	10,64	8,19	19,36	21,28
16. —	11,70	9,18	20,30	22,08

These Tables shew, that if we reckon Money worth 4 per Cent. then an Annuity to be granted for the joint Continuance of two Lives respectively worth 5 Years Purchase, is valued at $1\frac{6}{10}$ Years Purchase. An Annuity for the joint Continuance of 3 such Lives at $1\frac{21}{100}$. An Annuity for longest of two Lives at $7\frac{4}{10}$ Years Purchase. And an Annuity for the longest of three such Lives is worth $8\frac{87}{100}$ Years Purchase, &c.

CHAP. II. Of Renewing of Lives.

1. Suppose an Estate leased out upon two equal Lives, and that one Person die when the other Life is estimated at 9 Years Purchase, What is it worth to take in another Life, valued likewise at 9 Years Purchase, supposing Money at 5 per Cent?

For Answer, I find by the first of the foregoing Tables that an Annuity for the longest of two Lives which are singly valued at 9 Years Purchase to be 12,31, from which subtract the Value of the single Life, viz. 9 Years, and the Remainder 3,31 is the Value of the Life to be added.

2. Suppose an Estate leased out upon three equal Lives, and that one of the Persons dye when the other two are estimated at 9 Years Purchase, What is it worth to take in another Life valued at 9 Years Purchase, Money at 5 per Cent?

For Answer, I find by the Table that an Annuity for the longest of three Lives, which are singly valued at 9 Years Purchase, is worth 14,03, and an Annuity for the longest of two such Lives to be worth 12,31: the Difference between these two Values, viz. 1,72, is the Value of the single Life to be added to the other two; and if from 14,03 you subtract the Value of a single Life, viz. 9, the Remainder 5,03, is

what ought to be given for renewing of two such Lives.

3. Suppose an Estate leased out upon three Lives, and that upon the Decease of one of them, the Remaining two Lives are valued, the one at 8, and the other at 10 Years Purchase; and that you are willing to admit another Life to be joined to these two which is estimated worth 12 Years Purchase; What ought to be paid for the said Admission?

To Answer this Question, I say,

1. The Value of 3 Lives which are respectively worth 8, 10 and 12 Years Purchase; is found by Problems III^d and IVth, to be 15, 40 Years Purchase.

2. The Value of two Lives respectively worth 8 and 10 Years Purchase, is found by the Ist and II^d Problems to be 12, 40 Years Purchase.

3. From 15, 40 the Value of the three combined Lives.

Subtract 12, 40, the Value of the two surviving ones,

Remains 3, 00, which is the Value to be given for taking in the new Life.

Note. Although the last Question cannot be exactly answered by the foregoing Tables, yet I presume that the Answer resulting from them may be thought sufficiently exact in Practice; for, one third part of the Sum of 8, 10 and 12, is 10. Then looking in the 5 *per Cent.* Table, I find that if 3 single Lives be respectively worth 10 Years Purchase, the Value of an Annuity upon

upon the longest of them is 15, 14, from which subtract the Value of two Lives respectively worth 9 Years Purchase (*viz.* the half of 8 and 10) which by the said Table is found to be 12, 31, there remains 2, 83, or 2 Years and 10 Months, for Answer by the Table; whereas by the foregoing Problems it comes out exactly 3 Years Purchase

All the foregoing Tables are constructed upon the Supposition of the Interest being reckoned yearly, but as the Government pay the Interest of the greatest Part of the National Debt every six Months, I have computed the following Tables upon that Foundation.

[illegible]

4
Tables of Compound Interest at 4 per Cent. per Ann.
computing the Interest half yearly.

Years.	The Increase of 1. at 4 per Cent. half yearly.	The present Value of one Pound.

The following Problems will shew how the most useful Questions in Compound Interest, at the Rates of 4 and 5 *per Cent.* may be answered by the foregoing Table.

P R O B L E M I.

What will 150*l.* Amount to in 21 Years, at the Rate of $2\frac{1}{2}$ *per Cent.* half-yearly?

The Amount of 1*l.* in 21 Years is 2.82099

Which multiplied by 150

The Product is 423.1485

Answer 423*l.* 2*s.* 11*d.*

II. In what Time will 150*l.* amount to 423*l.* 2*s.* 11*d.* at the Rate of $2\frac{1}{2}$ *per Cent.* half yearly?

Divide 423.1485 by 150, the Quotient will be 2.82099, which in the first Table at 5 *per Cent.* is found against 21 Years, and that is the Answer to the Question.

III. At what Rate of Interest will 150*l.* amount to 423*l.* 2*s.* 11*d.* in 21 Years?

Divide 423.1485 by 150*l.* the Quotient will be 2.82099; which against 21 Years is found in the Table at 5 *per Cent.*

IV. What Principal Sum will amount to 423*l.* 2*s.* 11*d.* in 21 Years? Or, What is the present Value of 423*l.* 2*s.* 11*d.* payable at the End of 21 Years, at the Rate of $2\frac{1}{2}$ *per Cent.* half yearly?

The Answer to this Question is 150*l.* and may be found either by dividing 423.1485 by

2.82099,

2.82099, the amount of 1 *l.* in 21 Years, as by the first Table at 5 *per Cent.* or by multiplying 423,1485 by .3544848, the present Value of 1 *l.* to be paid 21 Years hence, as by the second Table.

V. What will an Annuity of 150 *l. per Ann.* to be paid half yearly, amount unto at the Rate of 5 *per Cent.* it being forborn 21 Years?

The Amount of 1 *l. per Ann.* in 21 Years at 5 *per Cent.* is found } 36.4199
in the third Table to be

Which being multiplied by 150

The Product will be 5462.985

Answer 5462 *l.* 19 *s.* 8 *d.*

VI. In what Time will an Annuity of 150 *l.* to be paid half yearly, amount to 5462 *l.* 19 *s.* 8 *d.* at the Rate of 5 *per Cent.*?

Divide 5462,985 by 150, the Quotient will be 36.4199, which in the third Table, at 5 *per Cent.* is found against 21 Years, that is the Answer to the Question.

VII. What Annuity to be paid half yearly, will amount to 5462 *l.* 19 *s.* 8 *d.* being forborn 21 Years at the Rate of 5 *per Cent. per Ann.*?

Divide 5462.985 by 36.4199, the Amount of 1 *l. per Ann.* in the given Time at 5 *per Cent.* the Quotient will be 150 *l.* which is the Answer to the Question.

VIII. What is the Value of an Estate of 150 *l. per Ann.* in Fee Simple, computing at the Rate of 4 *per Cent. per Ann.*?

The

The present Value of 1 *l. per Ann.* in Fee Simple, is found by the fourth Table to be 25 *l.* which multiplied by 150, the Product will be 3750 *l.* the Answer to the Question.

IX. What principal Sum will Purchase an Annuity or Lease for 21 Years of 300 *l. per Ann.* to be paid half yearly, at the Rate of 4 *per Cent. per Ann.* ?

The present Value of 1 *l. per Ann.* for a Lease of 21 Years, is found by the fourth Table to be $\frac{14,117,396}{300}$
 Which being multiplied by $\frac{300}{4235,2188}$
 The Product will be

Answer 4235 *l.* 43. 4d.

X. What Annuity to continue 21 Years, to be paid half yearly, will 4235 *l.* 43. 4d. Purchase, computing at the Rate of 4 *per Cent. per Ann.* ?

The Annuity which 1 *l.* will Purchase for 21 Years at 4 *per Cent.* is found in the 5th Table to be .0708346, which being multiplied by 4235,2188, the Product will be 300 *l.* the Answer to the Question. Or, 4235,2188 being divided by the Amount of 1 *l. per Ann.* in 21 Years, viz. 14,117,396, the Quotient will be the Answer, viz. 300 *l.*

XI. What is it worth in present Money to renew 7 Years lapsed in a Lease of 21 Years, the yearly Rent being 300 *l.* and reckoning Interest at 4 *per Cent. per Ann.* ?

The

(47)

The present Value of 1 *l.* per
Ann. for 21 Years, is found by the } 14,117396
4th Table to be _____

The present Value of 1 *l.* per
Ann. for the Years in *Esse*, viz. } 10,640636
14 is _____

Which Subtract _____
Remainder _____ 3.47676
Multiplied by _____ 300

The Product is _____ 1043.028

Answer 1043 *l.* 0 *s.* 6 *d.*

XII. *A*, has a Term of 5 Years in an Estate of 300 *l.* per *Ann.* *B*, has a Term of 7 Years in the same Estate in Reversion, after the Expiration of *A*'s 5 Years; and *C*, has a further Term of 9 Years in Reversion after the 12 Years: Now the Question is, What is the present Value of the several Terms, computing at the Rate of 4 per Cent. per *Ann.*?

A's Term is to be valued as a
Lease of 5 Years, which by Prob. } 1347 7 9
IX. will be found to be worth _____

B's Term is the Value of 7
Years in Reversion in a Lease of } 1489 14 0
12 Years, which by Prob. XI. is worth _____

And *C*'s Term is the Value of
9 Years in Reversion in a Lease of } 1398 2 7
21 Years, viz. _____

Sum, the Value of the whole } 4235 4 4
Lease of 21 Years _____

XIII.

XIII. The Sum of 4235,2188*l.* is paid for an Annuity of 300*l.* for 21 Years to come. I demand the Rate of Interest allowed the Purchaser?

Divide 4235*l.* &c. by 300. the Quotient will be 14,117396, which is found to be the present Value of 1*l.* *per Ann.* in 21 Years, at the Rate of 4 *per Cent.*

XIV. Suppose an Estate subject to the Payment of 100*l.* at the End of every 7 Years, what Sum in ready Money will discharge the said Incumbrance, reckoning Interest at the Rate of 4 *per Cent. per Annum*?

Divide the Sum of Money payable at the End of 7 Years, *viz.* 100*l.* by the Interest of 1*l.* arising in the said Term, *viz.* 0.3194787, as *per* Tab. I. Page 38, the Quotient will be 313*l.* which is the Answer to the Question.

If any other Case happens to occur, which falls within the Limits of the foregoing Tables, I am persuaded every Reader, that understands these Problems, will be able to answer it without Difficulty: But for other Rates of Interest, I refer either to Mr. *Smart's* Tables, or to the Rules laid down by Dr. *HALLEY*, and published with Mr. *Sherwin's* Mathematical Tables.

ERRATA.

To find what Interest is made *per Cent.*
per Annum of any Purchase, the Rule is,
 As the Price paid,
 Is to 100;

So is the yearly Dividend,
 To the yearly Interest for 100 *l.*

Or in other Words:

Divide the yearly Dividend, by the
 Price placed decimally, the Quotient
 will be the Answer.

Example I.

What Interest is made *per Cent. per*
Annum by paying 81 *l.* for an Annuity
 of 3 *l. per Annum*?

.81)3.00 (3 *l.* 14 *s.* Answer

$$\begin{array}{r} 57 \\ 20 \\ \hline 1140 \\ \hline 6 \\ \hline \end{array}$$

II. What Interest is made *per Cent.*
per Annum, by paying 104 *l.* for 3 *l.*
 10 *s. per Annum*? Answer

1.04)3.50 (3 *l.* 7 *s.* 3 *d.*

38 as in the following
 20 Tables.

$$\begin{array}{r} 760 \\ 32 \\ 12 \\ \hline 384 \\ 72 \end{array}$$
